

## Appendix C: Descriptions of Data Fields in Facility Recommendation Table

Recommendation Category	Other Info 1	Other Info 2	Meaning
LOS MET			Roadway currently operates at or above desired performance threshold
	(Blank)		No additional comment
	RESTRIPE 15ft		The existing roadway could be re-striped to provide a 4-foot bike lane/shoulder adjacent to 11-foot travel lanes
	RESTRIPE 17ft		The possibility exists for a 4-foot bike lane, separated by a 2-foot buffer, adjacent to 11-foot travel lanes
	RESTRIPE 14ft		The possibility exists for a 3-foot shoulder adjacent to 11-foot travel lanes, or a 4-foot bike lane/shoulder adjacent to travel lanes less than 11 feet wide*
RE-STRIPE			Restriping roadway with 4 foot bike lane/shoulder adjacent to 11-foot travel lanes will bring the roadway's Bicycle Level of Service score to a level that meets or exceeds the appropriate performance threshold
	(Blank)		No additional comment
	17 ft		The possibility also exists for a 4-foot bike lane, separated by a 2-foot buffer, adjacent to 11-foot travel lanes
ADD SHOULDER			The roadway's shoulders could be widened to accommodate bicycles at a level that meets or exceeds the appropriate performance threshold
	MINIMAL REGRADE		The roadside profile is basically flat and will require very little grading to allow construction of a wider shoulder
	MINOR REGRADE		The roadside profile may include small swales and other conditions which will require some grading to allow construction of a wider shoulder
		(Numeric Value)	The minimum shoulder width needed to bring the roadway's Bicycle Level of Service score to a level that meets or exceeds the appropriate performance threshold ; values will range between 4.0 and 6.0 feet.
DCSN			A detailed corridor-level study will be required to determine the appropriate strategies for accommodating bicycles along this segment
	MINIMAL REGRADE		The roadside profile is basically flat and will require very little grading to allow any construction adjacent to the roadway
	MINOR REGRADE		The roadside profile may include small swales and other conditions which will require some grading to allow any construction adjacent to the roadway
	SIGNIFICANT REGRADE		The roadside profile falls steeply away from the pavement to large swales and ditches; significant earthwork and drainage engineering may be required before any construction adjacent to the roadway
		(Blank)	No additional comment
		Restripe 14 meets LOS	The possibility exists for a 3-foot shoulder adjacent to 11-foot travel lanes, or a 4-foot bike lane/shoulder adjacent to travel lanes less than 11 feet wide*; such a facility would bring the roadway's Bicycle Level of Service score to a level that meets or exceeds the appropriate performance threshold
		Restripe 17, but need	The possibility exists for a 4-foot bike lane, separated by a 2-foot buffer, adjacent to 11-foot travel lanes; such a facility would NOT bring the roadway's Bicycle Level of Service score to a level that meets or exceeds the appropriate performance threshold
		Restripe 15, but need	The existing roadway could be re-striped to provide a 4-foot bike lane/shoulder adjacent to 11-foot travel lanes; such a facility would NOT bring the roadway's Bicycle Level of Service score to a level that meets or exceeds the appropriate performance threshold
		Shoulder possible, but need	The roadway's shoulders could be widened to accommodate bicycles; such a facility would NOT bring the roadway's Bicycle Level of Service score to a level that meets or exceeds the appropriate performance threshold
		Restripe 14, but need	The possibility exists for a 3-foot shoulder adjacent to 11-foot travel lanes, or a 4-foot bike lane/shoulder adjacent to travel lanes less than 11 feet wide*; such a facility would NOT bring the roadway's Bicycle Level of Service score to a level that meets or exceeds the appropriate performance threshold
<p>*This database shows where shoulders less than 4 feet wide and/or travel lanes less than 11 feet wide are possible within the width of the existing pavement. Any decision to design facilities with narrow shoulders or lane widths shall be made by the responsible engineer of the implementing agency on a case-by-case basis, upon careful review of the geometry, traffic conditions, and other characteristics of the subject segment, in accordance with design documents including: AASHTO's <i>A Policy on Geometric Design of Highways and Streets</i> (Green Book), AASHTO's <i>Guide for the Development of Bicycle Facilities</i> (Bike Guide) as well as FDOT's <i>Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways</i> (Florida Greenbook ) and <i>Plans Preparation Manual</i> (PPM). Notation of a geometric possibility for narrow lanes in this database in no way supersedes the professional judgment of local design professionals.</p>			

### Descriptions of Data Fields in Facility Recommendation Table

Other Fields	Entry	Meaning
<b>Existing Shoulder</b>	4+	Existing shoulder measured at 4 feet or greater
	3+	Existing shoulder measured at 3 feet or greater, but less than 4 feet
	"n/a"	No existing shoulder, or existing shoulder measured at less than 3 feet
<b>Marked?</b>	Marked	The existing shoulder is marked and/or signed as a Bike Lane
	(Blank)	The existing shoulder is neither marked nor signed as a Bike Lane
<b>Other</b>	Wide SW	The existing sidewalk was observed to be 8 feet wide or greater
	(Blank)	No additional comment
